

Jeffrey Darlington . Jarvis Consulting

Hi, I'm Jeffrey Darlington — a graduate of Seneca Polytechnic and a certified data analyst through NPower Canada, with a foundation built across software engineering, data systems, and infrastructure. What draws me to this industry is the role data plays as the backbone of modern business — not just as numbers, but as the engine behind decisions, products, and user experiences that shape how organizations operate and grow. My passion is building real systems end-to-end infrastructure where programming, data pipelines, and engineering thinking come together to solve meaningful problems and support better business outcomes.

Skills

Proficient: Java, Linux/Bash, RDBMS/SQL, Agile/Scrum, Git

Competent: Python, RDBMS/SQL(PostgreSQL, Oracle), Git, JavaScript, Data Analysis(Pandas, NumPy), Docker

Familiar: Linux/Bash, C/C++, GCP, React, TypeScript

Jarvis Projects

Project source code: https://github.com/jarviscanada/jarvis_data_eng_JeffreyDarlington

Cluster Monitor [GitHub]: Designed and built a lightweight cluster monitoring agent for Linux environments. Each node runs a Bash-based script that captures hardware specs and real-time resource metrics — CPU, memory, disk — and ships them to a centralized PostgreSQL database running in Docker. Built the full pipeline: data collection, automation via cron, containerized storage, and SQL-based validation to confirm accuracy.

Highlighted Projects

StockDataCollectionAnalysis [GitHub]: Extracted and visualized historical stock price and revenue data for Tesla and GameStop using finance and web scraping. Cleaned and structured the datasets with Pandas, then built reusable graphing functions to plot stock trends and quarterly revenue using Matplotlib.

VenezuelaOilReservoirs-Fields2026 [GitHub]: Built a data-driven inventory and valuation analysis of Venezuela's upstream oil and gas assets, covering legacy basins and Orinoco Belt developments. Engineered and cleaned raw reserve data, calculated Reserve-to-Production ratios, classified fields by lifecycle status, and surfaced portfolio risks around crude grade and infrastructure. Used Python, Pandas, NumPy, Plotly, and Seaborn to deliver both interactive and static visualizations across basin and asset segments.

Professional Experiences

Data Engineer, Jarvis (March 2026-present): “Developing production-ready as a data engineering solutions in an Agile environment, working across the full lifecycle from design to delivery. Collaborate closely with peers through standups, MCR sessions, and technical discussions, consistently shipping under tight timelines. Apply hands-on skills in pipeline design, debugging, and system architecture while adapting to new tools and frameworks as the work demands.”

Customer Service Associate, Sunrise Caribbean Restaurant (June 2022- Sep 2022): “Delivered clear, customer-focused communication to understand and address needs effectively while handling cash, credit, and digital transactions with 99% accuracy. Collaborated with team members to maintain cleanliness and organization, keeping daily operations running smoothly and efficiently.”

Education

Seneca Polytechnic (2023-2024), General Art Program Certificate, School of Creative Arts & Animation

Miscellaneous

- IBM Data Analyst Specialization
- Winner
- Heavy weight lifting
- Runner Half a marathon(25.30km)
- Volunteer at SMSK Church

- Photography
